Absorbers: Soda Lime

Biosorb Soda Lime is a carbon dioxide absorbent of choice for major hospitals worldwide. The major application of Soda Lime is in breathable gas applications where carbon dioxide levels need to be controlled, for example in medical anesthesia breathing circuits.

In these applications, breathable air is re-circulated for re-use and therefore any exhaled carbon dioxide needs to be removed in order to prevent a build-up to toxic levels. Biosorb Soda Lime effectively removes carbon dioxide due to respiration carried out by the patient.

BIOSORB BENEFITS:

- Very low dust content
- High absorption capacity
- As per appendix IX of MDD93/42/EEC
- Optimum hardness level 99% (As per USPXXII)

Circuits

Bio-Flow Circuits

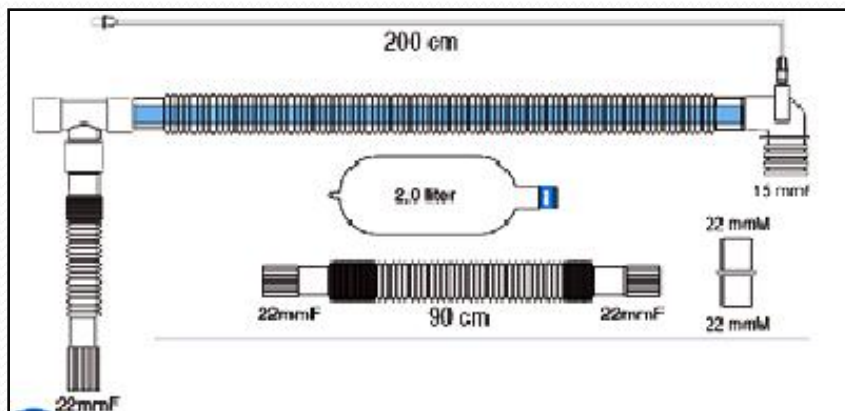

Bio-Flow Circuit is a streamlined tube within a tube system which is a multifunction capability increases patient care and comfort.

The innovative tube within a tube design allows greater mobility and allows better placement control for the healthcare professional. The best advantages of this system is that it becomes a self contained thermal efficient atmosphere where inspired gases are naturally warmed and humidified.

Benefits of Bio-Flow Circuits

- Unique customization capability provides an endless number of circuit configurations.
- Better tube compliance
- Lower kink resistance
- Naturally warmed inspired gases
- Affordable

Respiratory Catalog

Our associated company Biotronix Healthcare is an Industry leader of respiratory medical supplies, devices and products. We manufacture, supply and directly support our full line of products that includes nebulizers, oxygen masks, breathing circuits, open and closed suction catheters, yankauers, suction canisters, suction tubing and more. Our heat and moisture exchangers (HMEs) provide heat and humidity that result in patient comfort and safety, without condensation.

Aerosol Mask Products

▪Aerosol Mask

- Designed for patient comfort
- Clear, soft vinyl
- Extremely lightweight and flexible
- Adjustable nose clip
- Accepts 22mm ID aerosol tubing
- Can connect 6ml and 20ml nebulizer

-- Does not include tubing or nebulizer

our Associated company Biotronix Healthcare is the world leader in serving science. We provide our customers with blood collection tubes, rapid tests and consumables. Biotronix Healthcare serves customers in hospitals, clinical, diagnostic labs, universities, research institutions and government agencies around the world. So, whether your needs are to design a product from the ground up, or you are simply looking to lower your cost of products you currently sell, you can be confident that Biotronix Healthcare has the expertise and scale to meet all of your needs.

EDTA Collection Tubes

EDTA Tube is widely used in clinical hematology as well as various kinds of blood cell test instruments. The interior of the tube wall is coated with either K₂EDTA or K₃EDTA. The EDTA binds calcium ions thus blocking the coagulation cascade. EDTA tubes can be used in the closed mode with direct sampling analyzers. Meanwhile, it offers a comprehensive protection for blood cell, especially for protecting the blood platelet, so that it can effectively stop the gathering of blood platelet and makes the form and volume of blood cell uninfluenced in a long time. The ultrasonic spraying technique is used during the production process, which ensures complete and rapid decentralization of the additive, and thus sufficient mixing with the blood specimen.

Pro-Coagulation Collection Tubes

Pro-Coagulation Tube is used in blood collection and storage for biochemistry and immunology tests. It is coated with micronized silica particles which activate clotting in a comparatively short time. High quality serum can be acquired after centrifugation, meeting the requirement of fast clinic and emergency medicine.

Gel and Clot Activator Collection Tube

Gel & Clot Activator Tube is used for clinical biochemistry and immunology. Inside the bottom of the tube there is a barrier gel present, which is a pure substance, very stable in physical and chemical features. Even under a high temperature of 90°, the barrier inside will not change.

After centrifugation, the barrier can effectively separate the serum from fibrin and cells, while preventing substance exchange between blood cell and serum. As a result, it can keep biochemical characters and chemical components of serum unchanged for a long period of time. Serum can also be aspirated directly from the collection tube, no need to transfer to another container.

Sodium Citrate 1:9 Collection Tube

PT Tube (1:9) is mainly used for coagulation test. Citrate concentrations of either 0.109 mol/l (3.2 %) or 0.129 mol/l (3.8 %) are available. The choice of the concentration depends upon the policies of the laboratories.

The mixing ratio is 1 part citrate to 9 parts blood. It can provide buffered system and ultrahigh surface energy surface of blood specimen and avoid the activation of blood platelet. It can provide an excellent condition for the test of PT and APTT values.

Gel and Heparin Collection Tube

Gel & Heparin Tube is a kind of anti-coagulation tube with inert separation gel at the bottom of heparin tube.

Through centrifugation, the separation gel can form a barrier between plasma and blood cell and prevent substance exchange between them, while keeping the original characters of plasma.

Plasma specimen obtained is the best choice for electrolyte test, and is also used for plasma analysis in routine biochemistry and any emergent biochemistry. The specimen could be put into the equipment directly and kept stable in cold storage for 48 hours, which favors the specimen

Heparin Collection Tube

Heparin Tube is used in blood collection and anticoagulation not only for routine clinical biochemistry tests and emergency biochemistry tests but also for some test items in blood theology. It is coated with lithium heparin or sodium heparin. The anticoagulant heparin activates antithrombins, thus blocking the coagulation cascade and producing a whole blood/ plasma sample instead of clotted blood plus serum. Biotronix validates that through its special treatment, most of the plasma indexes can be repeated within 6 hours, especially for such sensitive ones as AST, ALT, TBIL, DBIL and GGT.

Glucose Collection Tube

Glucose Tube is used in blood collection and anticoagulation for the analyses such as blood sugar, sugar tolerance, anti-alkali haemoglobin, erythrocyte electrophoresis and sugar hemolysis. It is available with different additives, sodium fluoride/potassium oxalate and sodium fluoride/EDTA. Owing to the first use of special stabilizer and surface treatment inside the tube, glucose tube successfully solves the unavoidable hemolysis and prevent the occurrence of insoluble and anti-coagulant substance. So it can guarantee that value of blood sugar can be kept invariable within 72 hours.

Gel and EDTA.K2 Collection Tube

Gel & EDTA.K2 Tube is a kind of EDTA.K2 tube for a special use: the preparation of undiluted plasma specimen instead of whole blood specimen. There are 2 kinds of additives inside: inert separation gel at the bottom of the tube and EDTA.K2 sprayed in the interior surface above gel. Through centrifugation, the separation gel can form a barrier between plasma and blood cell and totally separate them, while keeping the original characters of plasma. It provides a safe, convenient and standard solution for the treatment, transport and storage of undiluted plasma specimen, especially for the test of undiluted plasma in molecular diagnostics and viral load detection

No Additive Collection Tube

No Additive Tube is used in blood collection and storage for biochemistry, immunology and serology tests in medical inspection. It can provide enough and unpolluted serum specimen for clinical test, while keeping the serum invariable in the long inspection period. It is applicable for all current mainstream biochemical analyzers.

Capillary Blood Collection Tube

Capillary Blood Collection Tube is mainly used in collection, storage, pretreatment and transportation of capillary blood specimen. It is suitable for newborn babies, infants, prostrate patients in ICU and other patients who are not able to collect venous blood (like those with bad burn). It is also suitable for collecting small-volume venous blood specimen (usually less than 1 ml). The tube is made from virtually unbreakable and highly transparent polypropylene

Lokenath Group (INDIA)

Micro-Albumin and Creatinine Reagent Test Strip

Microalbumin and Creatinine Test Strip are used for the semi-quantitative determination of albumin and creatinine in urine samples and determine the albumin to creatinine ratio in random urine. Test result may aid clinicians in the detection of patients at risk of developing kidney damage.

- Clear and visual semi-qualitative results in 1 minute
- No additional instrumentation or reagents required

LOKENATH GROUP (INDIA)

LOKENATH LONG LASTING INSECTICIDAL NETS

WHO/GMP calls upon National Malaria Control Programs and their partners involved in insecticide-treated net interventions to purchase only long-lasting insecticidal nets (LLINs)

Lokenath Group offers WHO PREFERRED LLIN made of high density polyethylene (HDPE) monofilaments incorporated with WHO approved insecticide providing long lasting protection against malaria, dengue, chikungunya, yellow fever, filariasis, encephalitis, leishmaniasis and other diseases spread by insect vectors.

- ❖ Manufacturing Capacity: 50,000 meters per day.
- ❖ Suppliers to Govt Departments in India and overseas and exporters of LLIN fabric to neighbouring countries like Pakistan.

SPECIALITY OF OUR PRODUCT AS COMPARED WITH OTHER HDPE AND POLYESTER LLINs

LONG LASTING : No fear of losing the insecticide on washing because our product uses controlled release of insecticide incorporated into the HDPE monofilaments. Very high wash resistance . Bioefficacy is high even after 25 washes.

BETTER BIOEFICACY : The insecticide (alpha-cypermethrin) used in product is a broad spectrum insecticide and is very effective against most common species of mosquitoes. Insecticidal activity is restored within 24 hours after wash.

ASSURED QUALITY : In-house testing facilities for both physical and chemical properties, and strict quality management in each and every stage of manufacturing with 3 decades experience in manufacturing HDPE mosquito nets.

READY TO USE : No chemical treatment is required.

HIGHLY COST EFFECTIVE : High durability and extended life considerably reduce the cost on personal protection against insect vectors.

GREEN PRODUCT : Product is packed in ox biodegradable plastic bags. The net (HDPE) can also be recycled.

EXTREME DURABILITY : Made of High Density Polyethylene (HDPE) monofilaments. Product uses 150 denier heavy duty HDPE yarn, much stronger than the 100 denier polyester yarn normally used by other manufacturers . Product has unsurpassed bursting strength (above 650 kPa) at the seams. Special high tenacity monofilament yarn is used for sewing.

Technical Specification for Long lasting Insecticidal Nets (LLIN's)

Mosquito Net (Insecticide Treated) for DOUBLE BED

SIZE:	Length 190 x Width 150 x Height 150 cm
MATERIAL:	100% Polyester, FDY, 36 filament.
FINISHED EDGE:	Rectangular
FABRIC:	Warp Knitted
DENIER:	60 Denier or 75 Denier
COLOR:	All Colours
WEIGHT:	30gm/sq+/- 10%
NETTING MESH SIZE:	Min. 325 holes per sq. Inch. Hexagonal Mesh.
DIMENSIONAL STABILITY:	To wash at 30 Degrees, +/-5%
BURSTING/STABILITY:	100D: 320 Kpa mini for Net & Seams.
MEASURING AREA 7.3cm ² 75D:	250kpa mini for Net & Seams, Measuring Area 7.3cm ²
FIRE STABILITY:	(16)
NET SUSPENSION:	Min. 6 Loops the Upper Corners + Middle; Min. Length 10 cm, Suspension loop material-polyester material
INSECTICIDE:	Content Deltamethrin Treatment, WHOPES recommended (Effect: Keeps away population of Mosquitoes whilst Keeping Human Beings Safe Including Children and Pregnant Women)
EFFECTIVE LIFE:	Minimum 2-4 Years, even after Washing more than 25 Times.

THE TECHNOLOGY:

Product uses a Unique proprietary formulation, developed through research and development, to impregnate the insecticide into high density polyethylene (HDPE) filaments. Unlike polyester and treated nets that have all the insecticide coated on the surface, product has it incorporated within the HDPE filament.

THE INSECTICIDE:

The insecticide used in our product is WHO approved alpha-cypermethrin. Alpha-cypermethrin is a wide spectrum insecticide. Among the pyrethroids approved by WHO for bed nets, alpha-cypermethrin is reported to have the fastest knockdown effect especially for *A. Gambia*, the malaria vector, and very effective for both susceptible and resistant strains of *A. Gambia*, (Hougard et al Bulletin of the World Health Organization 2003;81(5);324-333). Mammalian toxicity of alpha-cypermethrin is very low. Alpha-cypermethrin is racemic mixture comprising (R) and (S) isomers of α -cyano-3-phenoxybenzyl-3-(2,2-dichlorovinyl)-2,2-dimethylcyclopropanecarboxylate.

HOW DOES IT WORK ? ↩

The lethal combination of high knockdown and mortality effects of the insecticide incorporated into product's filaments kills almost all mosquitoes sitting on the Net. The Net does not provide mere physical barrier to mosquitoes but gives a far better protection to people due to high bio efficacy and is 100% safe to people sleeping under it.

MORTALITY: High mortality rate sustained even after 20 washes

DOUBLE PROTECTION: Provides both chemical and strong physical barriers.

KNOCKDOWN EFFECT: Causes knockdown of all
